Re: Acquisition of Rotapower engines

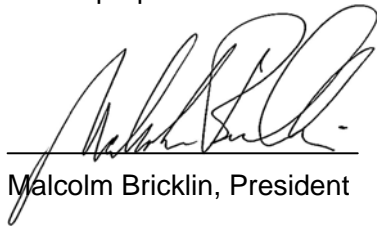

Attention: Dr. Paul Moller, CEO

We have reviewed various power plant options that could be suitable for a plug-in hybrid vehicle (PHEV). It is our conclusion that the Rotapower engine as described in your specification sheet and as it has performed in various applications is ideal for our use.

We require the Rotapower engine to meet the following criteria:

Horsepower > 60 HP  
Weight < 95 LBS  
Volume < 2 FT<sup>3</sup>  
SFC < .4 LB/HP HR  
Fuel = Multi-fuel including Hydrogen

Conditioned upon Freedom Motors meeting the above specification, Visionary Vehicles LLC is prepared to enter into an agreement to acquire up to 250,000 engines per year.

Malcolm Bricklin, President

P.S. Paul, I am personally very excited about the prospect of working with you and your engine technology. I believe it will take the forefront in propulsion systems for the 21<sup>st</sup> century!
